

Pile Weatherseals

Pile weatherseals provide the perfect low-friction seal between sliding window sashes and the frame.

UltraFab's proprietary ultrasonic welding process bonds the fin, fibers, and backing into one durable, integrated seal—designed to stay intact through fabrication and long-term use. Each seal features a solid polypropylene backing with centrally aligned pile fibers, guided by pile directors to make insertion easier and help keep the fibers standing upright.

Extruded Seals

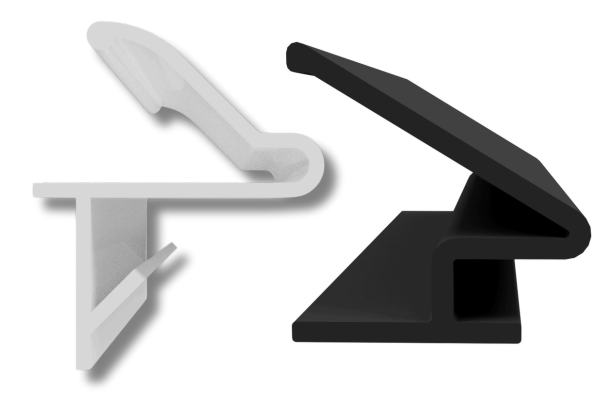

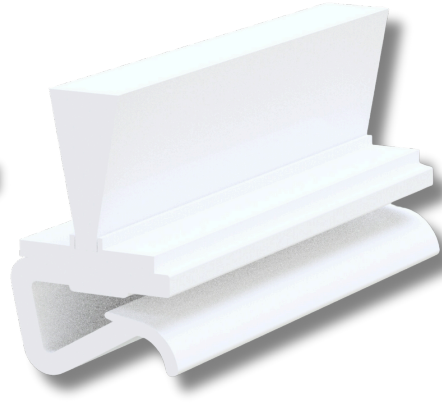

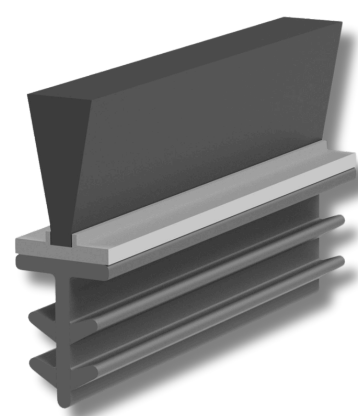

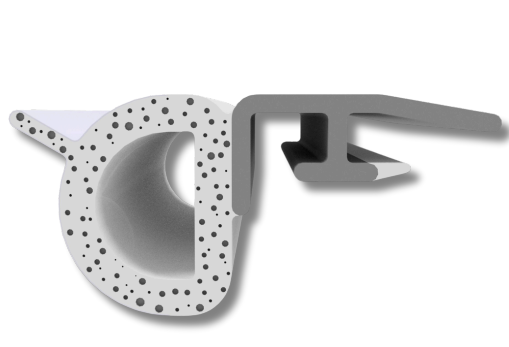

Extruded bulb seals are ideal for applications that require frequent compression between the sash and the frame—delivering a reliable seal that springs back.

These seals deliver excellent physical stability and feature superior adhesion between the TPV bulb and polypropylene base. Engineered by UltraFab, they provide industry-leading resistance to compression set and require minimal force to close.

Dust Plugs & Specialty Seals

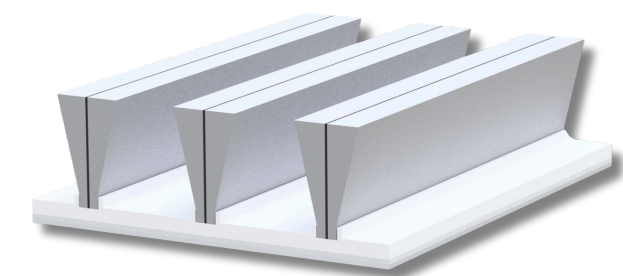

Specialty seals are designed to fill gaps and seal edges wherever windows and doors make contact, helping to improve performance at every touchpoint. Their unique configurations enhance protection, efficiency, and overall sealing capability.
